

Natural Stone Refinishing Corp.

Restoration of Fine Natural Stone and Tile

Lithofin® MN **POWER CLEAN** Instructions for Use

Lithofin® MN POWER CLEAN is a PH-neutral, acid-free cleaning solution that is recommended for use on all stone surfaces, including *Marble, Granite, Limestone, Terrazzo, Slate, Travertine*, etc. MN POWER CLEAN will clean stone surfaces without doing damage.

We recommend Lithofin® MN POWER CLEAN be used on all of the natural stone surfaces in your home, regardless of what finish your stone has (polished, honed, tumbled, textured, flamed, etc.

Instructions:

FLOORS: Add 3 to 4 tablespoons of MN POWER CLEAN into a 1-gallon bucket and fill the bucket with warm water. Stir the solution vigorously until mixed well, creating bubbles. Using a clean mop, get the mop wet keeping a small amount of solution on the mop head. Mop the surface evenly and let it air dry. If you see the water start to look dirty, replace it with clean water and add more MN POWER CLEAN. Make sure that you're not mopping the surface with the dirt you just removed.

DIRTY GROUT & HIGH-TRAFFIC AREAS: For areas where there is more dirt or there is dirty grout, use less water when diluting MN POWER CLEAN to make solution stronger. Leave a greater amount of the solution on the mop and allow the mop to sit on the floor for a few minutes. This allows the solution to break down heavier dirt. Ring out the mop top almost dry and mop the floor evenly again. Once done, let the floor air dry. If the grout is still dirty, use MN POWER CLEAN directly on the grout undiluted and scrub with a soft nylon bristle brush. Then wipe clean with a clean sponge or terrycloth rag.

WALLS & OTHER SURFACES THAT CAN'T BE MOPPED: Add 2 tablespoons of MN POWER CLEAN into a standard size spray bottle and fill with clean water. Mix the solution by gently shaking the spray bottle. Apply the spray to the stone surface and allow it to sit for a few minutes. This will allow the solution to break down the dirt and residue that is on the stone surface. Rinse the solution off the stone surface with clean water and then wipe the surface dry with a clean terrycloth rag.
